

# Milestone MIP Integration

The integration with the Milestone Xprotect VMS software allows for basic control of the Access It! Universal.NET software through the Xprotect Smart Client software. This integration is used for a simplified interface for use at a security station. Allowing quick and easy access to the video system from a single application, the integration also allows for monitoring of events and basic control of the doors within the Access It! Universal.NET software. The integration is available in the Access It! Universal.NET as a system-wide option.

The Xprotect Smart Client delivers a simple interface to monitor video and physical access control from a single application. Quickly and easily view events in real-time and view playback or live video from the Milestone Xprotect VMS.

## Integration Features:

- View current Access It! Universal.NET cardholders (including photos).
- Associate cameras with doors.
- View the current state of doors (locked/unlocked/open/closed).
- Unlock and lock doors with a button press.
- View access control events as they happen (e.g. door opened/closed/forced open).
- Have alarms raised and cleared in the XProtect Smart Client as a result of access control events.
